Content Analyser

Quickly and accurately analyse your business content to uncover growth opportunities with our AI-powered software

Before you start migrating your business content to a new target system, it's important to take stock of your current system landscape. Not just it's data size but what type of content it is and whether in fact, it all needs to be moved. Ultimately to save time and money before you even start your migration.

Content Analyser is built around proven data analytics best practice to deliver powerful and interactive Power BI reports that help you quickly drill-down into your organisations content.

Developing a deeper understanding of the content within your existing system helps to build the business case for migration and fast track design of your new target system.

Features and benefits

In-depth discovery & analysis
In-depth discovery and analysis of your source system with Power BI reports.

Pre-migration checks
Pre-migration checks to identify and mitigate potential issues.

Content structure review
Review metadata, taxonomy, structure and security permissions.

Gap identification
Identify metadata, taxonomy and security permission gaps.

Detailed analytics
Versatile, rules-based engine for detailed content analytics.

Item and version auditing
Reduce risk through comprehensive item-level and version-level audits.

Advanced content classification

If you are committed to cleaning up your data and improving business wide productivity then take a look at our Content ClassiFile add-on.

With Content ClassiFile take advantage of intelligent document classification and filing features including:

- Ensure documents and scanned images are automatically classified based on your business rules.

- Enable relevant document search.

- Efficient content governance – including the application of retention policies.

Additional benefits

Intelligent classification
Quickly and accurately categorise large volumes of business documentation by harnessing the power of AI and deep learning. Saving time and resources.

Automated fact extraction
Automate advanced metadata extraction thanks to inbuilt OCR functionality. Preserve business-critical information and make documents full-text searchable.
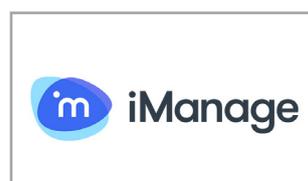

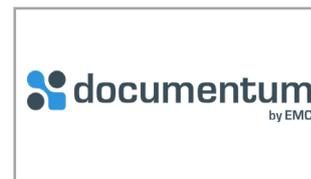

Smart filing
Mitigate the risk of human error with automatic document filing. Content ClassiFile updates documents in real-time and applies relevant security permissions.

Retention and protection
Due to regulatory requirements, some business documents need to be retained for a certain duration of time. Which can be a challenge, especially when working with large volumes of differing documentation, such as financial, medical, legal, or personnel information. ClassiFile will automatically determine which retention policy needs to be applied to a document based on the metadata and properties extracted through automated fact extraction and a rule-based approach.

Supported systems

Make analysing and classifying your content faster, easier and error-free with Proventeq's Content Analyser.
