Migration Accelerator

Make your content migration an opportunity, not a challenge with our AI-powered software

Proventeq's flagship software, Migration Accelerator is the content migration tool which enables seamless and error-free migration from your existing enterprise content management platform. It allows you to gain the maximum value from your business information by ensuring its new home is truly optimised for productivity, collaborative working and business growth.

Migration Accelerator maximises the potential of your content and information management infrastructure throughout each stage of your migration project. It is the perfect migration tool for high-volume, complex content migration projects where integrity, continuity and enrichment are a priority.
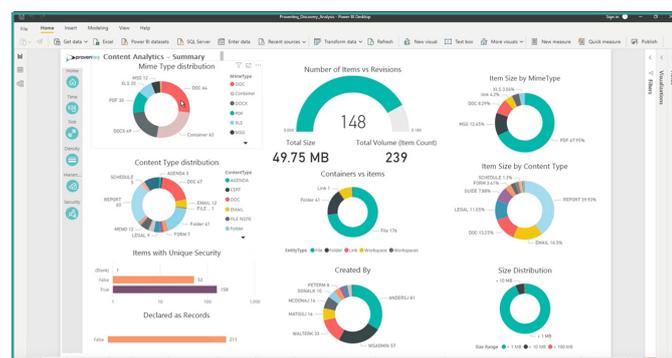

"Working with Proventeq and Migration Accelerator allowed us to figure out all of the different mechanics of how to migrate and restructure our data. This allowed us to have a clean break and start working immediately in our new system."

Honza Červenka
Internal Project Lead, McAlister Olivarius

Before migration

Gain actionable insights into your content

Full discovery and analysis of your content to accurately inform your new architecture with detailed drill-down reports using Power BI.

Identify potential issues

Stay on schedule and in budget with intelligent pre-migration checks which pre-emptively identify potential risks to your migration project.

During migration

Maintain business continuity
Minimise downtime thanks to high-speed, incremental migration and reusable scheduled tasks.

Seamlessly enforce compliance
Customisable rules give you the power to ensure compliance to your internal and industry standards by applying the required retention and sensitivity labels.

Intelligently classify documents
Our AI engine uses machine learning to intelligently recognise and classify the increasing volume of unstructured data created by your business every day.

Enrich content metadata
Easy to configure rules allow metadata values to be set in your new target system either informed by your source system or be computed as part of the rules.

Securely map users and groups
Map active or inactive users and groups from your source system to active users in your target system including access rights. Preserving content security.

Manage links
Update links inside documents with the source link in your new system to keep them active post-migration.

After migration

Reduce downtime
Expedite go-live with minimal downtime achieved using incremental (delta) migration.
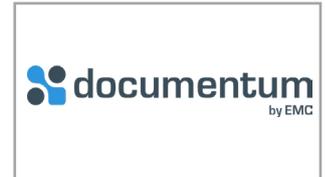

Integrate your content portfolio
Want to keep an existing system live after migration? Consolidate content from multiple source systems and repositories simply and quickly.

Improved user productivity
Exploit the potential of your content through optimised AI and searchability and turn your information into your most powerful business asset.

Supported systems

SharePoint	OneDrive
Exchange Public Folders	CITRIX ShareFile
File Share	documentum by EMC
opentext	FileNet
iManage	M-Files
ORACLE	Alfresco
meridio	STELLENT
