Capgemini and Proventeq joined forces to migrate 70TB of content from Documentum to Sharepoint Online and ProjectWise for a world leader in the construction industry, optimizing collaboration and maximizing productivity and profitability for the future.

**Case study summary**

To centralize content storage and enhance project collaboration, the client was looking to migrate a large volume of content from Documentum to SharePoint Online.

The client chose Capgemini working in partnership with Proventeq to discover, analyze, transform and migrate their content to SharePoint Online. We not only met the challenges that the complex migration project presented, but also fully leveraged SharePoint's content management and user productivity potential.

**The challenges solved**

- **A large volume of data**
  More than 70TB of emails and documents were archived in the Documentum repository.

- **Tight timeframe for a large migration**
  Migration needed to be conceived, planned and executed prior to the imminent decommissioning of Documentum.

- **Complex storage infrastructure**
  Documentum files were stored and managed in a hybrid infrastructure between on-premises and Azure.

- **Content restructuring**
  Migration work had to be split across multiple site collections and libraries to stay within the SharePoint Online technical design recommendations.

- **Deep folder hierarchy**
  Folders and artefacts were excessively nested within the Documentum source platform making the content difficult to work with.

Documentum to SharePoint Online and Documentum to ProjectWise

Proventeq worked alongside Capgemini to support a leader in the construction sector in over 100 countries, known for improving the lives of communities through consulting, engineering, construction, operations and program management.
By moving content from Documentum to SharePoint online, Proventeq and Capgemini were able to help reduce the time the client spent searching for and working with content. We suggested the client take advantage of Microsoft 365’s features, which provides a much better search experience instead of the legacy counterpart.

Significant cost-saving
The client was able to make significant licensing and infrastructure costs savings by decommissioning the IBM FileNet archiving & eDiscovery platform.

High throughput
High throughput migration with more than 1 million items migrated per day throughout the project. Multiple instances of Migration Accelerator were running in parallel to facilitate this outcome.

“Proventeq are a team of professionals that I would recommend anytime for similar projects.”
Digital Services Portfolio Leader, Client

Make your content work smarter with Proventeq
Proventeq specialises in migration from non-Microsoft and legacy Microsoft systems to SharePoint, Teams and OneDrive. Our AI-powered migration and productivity solutions turn your Microsoft 365 adoption challenges into opportunities.
