McAllister Olivarius are an international law firm who focus mainly on bringing discrimination claims in the United States, England and Wales. They also have a thriving practice in corporate law, conducting transactions and providing advice for companies on both sides of the Atlantic, and two charities; all housed at their Maidenhead Headquarters.

**Company name**
McAllister Olivarius

**Location**
UK

**Industry**
International Law Firm

**Project**
iManage to SharePoint

**Case study summary**
As is common amongst law firms, McAllister Olivarius were operating on an iManage Worksite system. The limitation of managing content from 4 separate divisions and entities within the organisation in the Worksite platform resulted in the need for a more structured and inclusive online environment. To address this situation, Microsoft's SharePoint Online product was chosen to provide a complete and extensible content services component for the practice.

To enable this quickly and smoothly, McAllister Olivarius chose Proventeq's Migration Accelerator software and an extensive migration service program to provide a timely, end-to-end solution.

"Working with Proventeq allowed us to figure out all of the different mechanics of how to migrate and restructure our data. This allowed us to have a clean break and start working immediately in the new system”

**Honza Červenka**
Internal Project Lead, McAllister Olivarius

**The challenges**

**Creation of new file structure**
The creation of a new ‘tree-like’ hierarchy file structure required the flattening a large number of nested folders and mapping these to the new system.

**Organisational segregation**
With three sister organisations; files were located in the same flat system which required a segregated configuration where each organisation had their own workspace.

**Content Integrity**
More than 500,000 files required both accurate migration from Worksite, and that all important case assets retained their relationships and integrity.

**Review of existing architecture**
A review of the existing information architecture was needed to determine necessary mapping and transformation rules based on metadata required for migration.

**Strict timeframe for migration**
To minimise the impact to the busy law practice both in the UK and internationally, the migration had to take place over a 48 hour period.
Data Consistency and Reliability

McAllister Olivarius had a high number of files to be migrated; frequent item level audits monitored asset integrity and preserved critically important case files. This ensured that McAllister Olivarius maintained the flawless degree of data consistency required, met the challenges of internal governance and regulatory control, and were able to complete a frictionless transition from iManage Worksite to SharePoint.

Best practice strategy

Proventeq’s migration experts worked closely with McAllister Olivarius to design and implement a best practice content migration solution to enable a smooth transition to their new SharePoint Online environment.

Discover and analysis
After meeting with the client’s team to understand their particular migration requirements, Proventeq performed a full discovery and analysis of content to identify inconsistencies and potential issues prior to migration.

Information architecture organisation
Classification and separation of data was efficiently processed to meet the demands of accessibility and navigation within the SharePoint architecture for all four separate McAllister Olivarius entities.

Plot migration
Migration Accelerator’s pilot migration feature allowed full mapping of all content prior to live migration; keeping their firm operational on their existing ECM system prior to the go-live of SharePoint Online.

Incremental Live Migration
Proventeq migrated all 500,000 files and numerous user IDs over a 48 hour period. Integral item audits took place during the process to ensure that any errors were instantly noticed and rectified, and each item was migrated safely.

The results

Make your content work smarter with Proventeq
Proventeq specialises in migration from non-Microsoft and legacy Microsoft systems to SharePoint. Our AI-powered migration and productivity solutions turn your SharePoint adoption challenges into opportunities.

Practical content structure
By professionally tailored a new structuring system that matched the brief, Proventeq enabled McAllister Olivarius to effectively separate content from each of the 4 entities which make up the organisation. Additionally, each corporation was disconnected and remapped into its own digital landscape. These measures have helped McAllister Olivarius to work in a much more efficient manner, and provided an effective method to manage content across the practice.

Minimul impact to business
Business continuity is always a worry when considering a sizeable migration; Migration Accelerator’s trial function created a detailed map for the content, and was therefore able to be completed to an extremely strict timescale. This ensured that both the migration process itself, and the switchover between platforms, did not impact the client’s business negatively.
